About iCool

A little background information about iCool and why more than 70% of the newest mobile ice bath systems in use around the world are iCools.

Although ice baths are in widespread popular use by elite athletes around the world today, it was not long ago that the only way to cool an ice bath was with large amounts of ice. That was before iCool designed and developed the first practical portable cooling system for ice baths. Those early award winning models were the beginning of continuous research and development that led to today's cutting edge iCool's, the iCool's that are seen at most major sporting facilities all round the world today.

iCool's technology has freed athletes and sports specialists from having to find large quantities of ice, and more importantly, for the first time they have the ability to carry out ice bath recovery and training sessions either at home or in the field with great accuracy and consistency and to conduct recovery session times for as long as they wish. None of this is possible using ice. Today, using an iCool, it is practical to carry out tightly controlled accurate ice bath protocols almost anywhere on demand.

Today we manufacture the world's most popular and successful modern ice bath systems in Australia.

It is remarkable fact that in spite of a population of only 23 million, Australia ranks consistently among the world's top 10 sporting nations. 4th in the world in the 2000 and 2004 Olympic Games and 6th at the 2008 Olympic Games and in the top 10 in the 2012 Olympic Games, competing against more than 150 nations.

Also, Australia was the overall winning nation at the 2006 & 2010 Commonwealth Games, competing against athletes representing one third of the world's population. Apart from the nation's enormous enthusiasm for all sport, much of this remarkable success can be attributed to Australia's many dedicated sports scientists and advanced training organisations and the new medical and endurance training technologies that they have developed.

The iCool recovery systems are based on pioneering recovery and endurance research and the technology developed from that research at the prestigious Australian Institute of Sport, plus years of field testing and the advice and support of many of Australia's dedicated sporting coaches and sports medicine specialists involved in university based research programs.

Time Line of iCool's Award Winning Innovation

Choose your Perfect Compact Cooling System:

Compact C Series:

“Cool”

Great performance for everyday use and excellent value for money.

NEW 2013 version of the world's most popular mobile ice bath cooling system. The perfect choice for most recovery and pre-cooling applications using a single pool. It looks great, has heaps of cooling power, excellent reliability and is easy to transport and features completely automatic operation. All this at a surprisingly low purchase price for such advanced technology.

“Dual Temp”

All new power saving heat pump technology for 2013.

The world's only all-in-one unit for either cooling or heating a pool for contrast therapy.

The convenience of having either super high efficiency, low running cost, heating or cooling capability at the touch of a button. Just perfect for a 2 pool installation. The Dual Temp can operate one pool in heat mode while a Cool or Twin can be added to run a cold pool and when you need to cope with extra athletes the Dual temp can double as a perfect chiller giving you two icebaths.

“Twin”

More power for hot weather, difficult conditions, or larger pools.

35% extra cooling power to automatically chill either 1 or 2 iCool single pools at one time or any of our multi person pools or even your own spa bath up to 1000 litres. The Twin costs considerably less to own and operate than any similar powered commercial chiller. Power, performance and reliability and fully mobile if you need to use it elsewhere.

“Twin XP”

All New for 2013 the iCool “TWIN-XP” is the most powerful, compact iCool we have ever made.

This impressive unit fills the gap between the Twin and the brute power of our TurboCools.

In most cases the XP is all the power you will ever need, yet it is fully transportable and can be installed in minutes, anywhere, anytime. Supplied with an extra large 8 inch colour touchscreen to improve visibility even in large gymnasiums and stadiums.

The latest specifications and prices are available on our website

BIGGER BRIGHTER FULL COLOUR TOUCH SCREENS

Big New 8" screen

A really great modern user interface that leaves everything else in the dark ages.

Colour Touch Screen

In 2009 iCool was the first manufacturer of ice bath equipment to introduce full colour touch screens to all of our models and today we are still the only one offering this advanced technology.

Our engineers have replaced all of the confusing switches and buttons with a bright friendly easy to read high resolution colour touch screen on every model.

Touch screens are everywhere these days for good reasons. Apart from making it much easier to use any equipment, they allow us to add many useful features such as instructions and help screens and to display all temperature and operational information clearly. It also allows us to modify systems to suit customers needs and to add your private team logo to the screen graphics.

Should anything happen to the screen, every iCool has an emergency over ride function that can keep your unit operating and save the day.

**Choose from four perfect training and recovery models.
In the Gym, On the road or anywhere your training takes you.**

Easy To Use - Powerful - Practical - Reliable

Ice bath therapy is now widely accepted as effective & wellproven.

- The accurately controlled temperatures substantially improve athletic endurance.
- Speeds up recovery from hard exercise, exhausting competition and high body temperatures.
- Speeds up the repair of muscles and soft tissue damage much more efficiently and with less hassle than ice packs.

Most of the world's leading athletes, sporting teams and training organisations now use ice baths and today most choose iCools for ice bath or contrast (hot & cold) therapy in the gym, on the road or wherever the proven benefits of accurate temperature recovery are needed.

Extra strong construction

All iCools are built on a strong but light marine grade aluminium alloy chassis built by computer controlled machinery for accuracy and strength. All Compact models are mounted on wide strong advanced polymer wheels and fitted with rugged stainless steel handles.

Safe and easy transport

For the ultimate protection of your iCool, we recommend our tough industrial grade polyethelene travel cases that are designed and constructed specifically for safely transporting a Compact iCool and accessories. This combination makes handling and transport so easy for busy sports teams.
